

Admin order detail — canonical operational state

Date: 2026-07-16

Scope: `/admin/orders/[orderId]` + Issues search inclusion + manual recovery lifecycle

Example order: `#WH6S9AAL ( cmrc1zwdn0002sfyxwh6s9aal )`

Root cause

Recovered completed orders stayed in **active Issues search** because successful admin manual recovery historically created (or left) an **OPEN VendorOrderIssue** of type `manual_recovery` after resolving `routing_failure`.

Active Issues inclusion used open `VendorOrderIssue` rows without excluding that artifact type. Separately, UI helpers derived “current” attention from raw `routingStatus === "failed"`, so the detail page still showed “Vendor did not receive order”, active Square failure banners, and retry affordances even after `manuallyRecoveredAt` + completed fulfillment.

Canonical state model

Server-side `buildAdminOrderOperationalSummary ( src/lib/admin-order-operational-summary.ts )` is the single source for:

- Header status + recovery detail
- Whether the Attention card renders (`needsAttention`)
- Vendor card status / receipt / retry flags
- Active vs resolved issue lists used by the page

Supporting gates:

- `getExceptionType` — no active exception after recovery / fulfillment progress
- `getAdminActionState` — terminal and recovered checked before retry/recovery actions
- `getOrderIdsWithOpenIssues` — excludes `NON_ACTIONABLE_VENDOR_ORDER_ISSUE_TYPES ( manual_recovery )`

Issue lifecycle changes

Preferred model (implemented): manual recovery is metadata + timeline event, not a new open issue.

On `POST .../manual-recovery` :

1. Transition fulfillment to `accepted` with recovery fields (`manuallyRecoveredAt` / `By` / `Notes`)
2. Resolve open `routing_failure` **and** any legacy open `manual_recovery` rows
3. Do **not** create a new open `manual_recovery` issue

UI treats leftover open `manual_recovery` rows as non-actionable (displayed as resolved history).

UI consolidation

Before	After
Duplicate Completed / summary chips	One header status + optional recovery detail
Always-on Attention ("Vendor did not receive...")	Attention only when <code>operationalSummary.needsAttention</code>
Competing POS / kitchen / receipt rows	Vendor panel: current state + receipt + allocation; historical Square under "View resolved routing issue"
Notes & issues + separate resolution notes	Activity & notes (active → resolution → resolved collapsed → link to timeline)
Raw <code>routing failed</code> · fulfillment completed in operational UI	Raw routing/fulfillment only in collapsed technical details
Clawback copy for \$0 refund	Clawback detail/warning only when <code>clawbackRequiredCents</code> > 0

Search behavior

Active Issues (`getOrderIdsWithOpenIssues`):

- Includes open/actionable `OrderIssue` statuses
- Includes `VendorOrderIssue` with `status === "OPEN"` **except** `manual_recovery`

Resolved / history tabs continue to surface resolved issue records (including resolved routing failure and repaired recovery artifacts).

Data repair

Dry-run found **1** eligible stale open `manual_recovery` on the example order.

Repair applied:

Field	Value
Issue id	<code>cmrcngpfc0009rmva3gxaekm6</code>
Order id	<code>cmrc1zwdn0002sfyxwh6s9aa1</code>
Result	<code>RESOLVED</code> by <code>cleanup-stale-manual-recovery</code>
Remaining open <code>manual_recovery</code>	0

Script:

```
npm run issues:cleanup-stale-manual-recovery      # dry-run
npm run issues:cleanup-stale-manual-recovery:execute # mutate
```

Tests

```
npx vitest run \
  src/lib/admin-order-operational-summary.test.ts \
  src/lib/admin-order-health.test.ts \
  src/lib/admin-order-detail-layout.test.ts \
  src/app/api/admin/vendor-orders/[vendorOrderId]/manual-recovery/manual-
recovery.route.test.ts \
  src/lib/admin-needs-attention-actions.test.ts \
  src/app/admin/(dashboard)/exceptions/IssuesWorkbench.test.ts
```

Result: 6 files, **45 passed**, 0 failed.

`npm run build` — **passed** (compile + typecheck of app; transient Prisma pool warnings during static generation only).

Acceptance checklist

- ☒ Completed manually recovered order not in active Issues (search exclusion + issue resolved)
- ☒ Manual recovery does not create a new open issue
- ☒ One authoritative current status from operational summary
- ☒ Attention section only for current actionable problems
- ☒ Historical Square failure collapsed as resolved context
- ☒ Retry hidden after successful recovery / completion
- ☒ Vendor receipt / fulfillment / header no longer contradict
- ☒ Redundant status sections merged
- ☒ Clawback-required copy gated on required cents / actual refund path
- ☒ Technical raw state collapsed
- ☒ Repair script + focused tests + production build
