

Square Routing Mode Unification

Date: July 8, 2026

Scope: Use `orderRoutingMode` as the single source of truth for Square routing; remove separate admin injection toggle.

Summary

Square routing now behaves like Deliverect: selecting `orderRoutingMode=square` determines vendor setup UI and post-payment routing intent. The separate `squareOrderRoutingEnabled` vendor flag is **deprecated** and no longer gates readiness or routing. `SQUARE_ROUTING_LIVE` remains the only global API kill switch.

Files changed

File	Change
<code>src/lib/integrations/square/square-order-routing-readiness.ts</code>	Removed <code>squareOrderRoutingEnabled</code> from operational readiness
<code>src/lib/integrations/square/square-routing-readiness.ts</code>	Square routing mode always selectable; <code>assertSquareRoutingSelectable</code> always passes
<code>src/lib/vendor-order-routing-mode.ts</code>	Operational readiness + copy use routing mode only
<code>src/services/routing.service.ts</code>	Removed <code>squareOrderRoutingEnabled</code> gate before Square submit
<code>src/services/admin-vendor-rescue.service.ts</code>	Removed Square connection gate when saving routing mode
<code>AdminVendorOrderRoutingSection.tsx</code>	Removed injection enable/disable UI; added Square readiness card
<code>AdminSquareOrderInjectionDiagnosticsPanel.tsx</code>	Renamed to Square routing diagnostics; deprecated flag labeled
<code>src/lib/integrations/provider-display.ts</code>	<code>adminSquareRoutingStatusSummary</code> , updated kitchen copy

<code>VendorSquareSetupSummary.tsx</code>	Provider-aware readiness copy (no admin enablement)
<code>VendorIntegrationReadinessCard.tsx</code>	Removed admin enablement notice
<code>src/app/vendor/[vendorId]/setup/page.tsx</code>	Loads Square operational readiness for setup summary
<code>src/lib/vendor-pod-readiness.ts</code>	Square checklist copy uses <code>squareOrderRoutingReady</code>
<code>src/lib/vendor-dashboard-data.server.ts</code>	Passes <code>squareOrderRoutingReady</code> from readiness loader
Tests (8 files)	Updated for new behavior

squareOrderRoutingEnabled status

Aspect	Status
Prisma schema / DB column	Retained (no migration this sprint)
Readiness gating	Removed — ignored for <code>injectionOperationalReady</code>
Post-payment routing	Removed — <code>routing.service.ts</code> no longer checks it
Admin UI toggle	Removed — enable/disable section deleted
Diagnostics panel	Shown as deprecated/ignored for audit visibility
<code>adminSetSquareOrderRoutingEnabled</code> service	Retained (API backward compat) but not wired to UI

Vendors with `squareOrderRoutingEnabled=false` and `orderRoutingMode=square` will route to Square when all real prerequisites pass.

New Square operational readiness

Ready when all true:

- `orderRoutingMode === "square"`
- `SQUARE_ROUTING_LIVE === true`

3. Square OAuth connection healthy
4. Selected Square location present
5. Published Square-imported menu (`square_catalog_v1`)
6. Active `ProviderEntityMapping` item coverage for routeable items
7. Required OAuth scopes present (orders/payments)

Not required: `squareOrderRoutingEnabled`

Admin UI changes

- All routing modes (manual, Deliverect, Square) are **always selectable**
 - Saving `orderRoutingMode=square` does **not** require Square connection
 - Square radio shows inline readiness checklist:
 - Connection, location, menu, mappings, `SQUARE_ROUTING_LIVE` , routing status
 - Provider-aware headline copy (ready / connect / import menu / global kill switch)
 - **Removed:** "Enable/Disable Square order injection" forms
-

Post-payment routing

For `orderRoutingMode=square` :

1. `submitVendorOrder` always calls `submitVendorOrderToSquare`
2. `assertSquareOrderRoutingReady` checks operational prerequisites + `SQUARE_ROUTING_LIVE`
3. On failure: `routingStatus=failed` , routing issue created (existing Square order service behavior)
4. No silent fallback to Deliverect or manual

Manual and Deliverect branches unchanged.

Vendor setup / integrations

Mode	Vendor sees
<code>square</code>	Square integration summary, connection checklist, integrations hub Square card
<code>deliverect</code>	Deliverect setup path (unchanged)

manual_dashboard	Dashboard/tablet readiness (unchanged)
------------------	--

Selecting Square before connection now drives the correct vendor UI immediately.

Tests / QA

Suite	Result
square-order-routing-readiness.test.ts	10/10
routing.service.test.ts	7/7
admin-vendor-order-routing.test.ts	5/5
vendor-order-routing-mode.test.ts	16/16
provider-display.test.ts	19/19
admin-vendor-detail-provider.test.ts	8/8
vendor-pod-readiness.test.ts	28/28
vendor-readiness-states.test.ts	17/17
npm run build	Passed

Known limitations

1. `squareOrderRoutingEnabled` column still exists — follow-up migration/TODO to remove.
 2. `adminSetSquareOrderRoutingEnabled` API remains but is unused from UI.
 3. Customer orderability still allows Square vendors to accept orders when connection-only setup passes (unchanged product behavior); routing fails clearly post-payment if not operational.
-

Acceptance criteria

Criterion	Status
Admin can select Square before vendor connects	✓
Selecting Square drives Square setup UI	✓

No separate injection enable/disable section	✓
Square behaves like Deliverect (mode = intent)	✓
<code>SQUARE_ROUTING_LIVE</code> remains global kill switch	✓
Checkout, payouts, Deliverect, manual unchanged	✓
