

# Vendor Setup Page — Integrations Layout & Collapsible Checklists

**Date:** 2026-07-08

## Summary

The vendor setup page now uses collapsible readiness checklists and a provider-aware **Integrations** section. The generic **Integration readiness** card (which surfaced irrelevant Square connection warnings for Deliverect vendors) was removed from setup. Checkout, payouts, and routing behavior are unchanged.

## Files changed

| File                                                                     | Change                                                                                        |

| <code>src/app/vendor/[vendorId]/vendor-dashboard-redesign.test.ts</code> | Updated setup page expectations                                                               |

### Unchanged (still used elsewhere):

- `VendorIntegrationReadinessCard` — vendor `/integrations` hub
- `VendorSquareSetupSummary` — component retained; no longer on setup page

- Admin diagnostics, routing services, checkout, payouts

## Checklist collapse behavior

Each checklist section ( `Required to appear on pod page` , `Required to accept orders` ) now has:

- **Header:** title, Ready / Needs attention badge, `N of M ready` , chevron
- **Default state:** expanded when any item is incomplete; collapsed when fully ready
- **Manual toggle:** vendor can expand/collapse at any time
- **Collapsed summary:** lists incomplete item labels when not ready; “All requirements complete” when ready

The locked “Required to accept orders” placeholder (when public profile is incomplete) remains a static dashed section.

## New Integrations section layout

Placed **below** setup checklists.

**Title:** Integrations

**Subtitle:** Manage how this vendor receives orders and keeps menus in sync.

### Cards

1. **Active order routing** — only the selected `orderRoutingMode`
2. **Active menu source** — independent of routing ( `menuSource` + routing-aware labels)
3. **Available integrations** — collapsed `<details>` with non-blocking inactive providers

## What replaced the old Integration readiness card

Removed from setup:

- `VendorIntegrationReadinessCard` (Order routing / Menu source / Square connection rows)
- `VendorSquareSetupSummary` duplicate Square block

Replaced with `VendorSetupIntegrationsSection` driven by `buildVendorSetupIntegrationsView()` .

## Provider-specific behavior

| Routing mode           | Active routing card           | Inactive providers                           |
|------------------------|-------------------------------|----------------------------------------------|
| <b>Deliverect</b>      | Deliverect readiness only     | Square, Toast in Available (neutral styling) |
| <b>Square</b>          | Square readiness only         | Deliverect, Toast in Available               |
| <b>Manual / tablet</b> | Open Order Dashboard / Tablet | Square, Deliverect, Toast in Available       |

### Menu source card (independent):

- Deliverect → “Menu source: Deliverect”
- Square routing + open\_order menu → “Menu source: Square catalog”
- Otherwise → “Menu source: Open Order menu builder”

Inactive provider cards use **Available** / **Not configured** / **Coming soon** — never amber warning styling unless that provider is the active routing or menu source card.

## Inactive provider handling

- Square not connected does **not** appear as a setup blocker for Deliverect or manual vendors
- Deliverect not connected does **not** appear as a setup blocker for Square or manual vendors
- Optional links (e.g. “View Square integration”) live under collapsed Available integrations

## Tests / QA

| Test                                       | Result |
|--------------------------------------------|--------|
| vendor-setup-checklist-summary.test.ts (3) | Pass   |
| vendor-setup-integrations.test.ts (10)     | Pass   |
| vendor-dashboard-redesign.test.ts (8)      | Pass   |
| npm run build                              | Pass   |

Covers acceptance criteria: collapsible checklists, no cross-provider setup warnings, routing-driven active cards, independent menu source, collapsed available integrations.

## Known limitations

- **Toast** is a placeholder (“Coming soon”) with no connection flow.

- **Menu source vs routing mismatch** (e.g. Deliverect menu + manual routing) is shown via menu source title/readiness but not a dedicated mismatch banner on setup.
- **Vendor integrations hub** ( `/vendor/[id]/integrations` ) still uses `VendorIntegrationReadinessCard` ; only the setup page was migrated to the new section.
- Collapsed checklist state resets on full page navigation (no persistence in localStorage).

## Behavior unchanged

- Checkout and post-payment routing validation
- Payouts
- Square injection and Deliverect/manual routing logic
- Admin diagnostics and integration detail pages
