

Provider-Aware Vendor/Admin Page Cleanup

Date: July 8, 2026

Scope: Generic POS routing UX — remove hardcoded Deliverect/Square copy from shared vendor/admin pages.

Summary

Vendor and admin pages now use a centralized **provider display registry** (`src/lib/integrations/provider-display.ts`) instead of hardcoded Deliverect- or Square-specific strings. Kitchen Mode, Menu management/imports, admin vendor detail, and a new integrations hub all render provider-aware copy based on `orderRoutingMode` and import source.

No behavioral changes to checkout, payouts, Square order injection, Deliverect routing, manual/tablet routing, or menu publish/import flows.

Files changed

File	Change
<code>src/lib/integrations/provider-display.ts</code>	New/extended — helpers for subtitle kitchen notices, ad gating
<code>src/lib/integrations/provider-display.test.ts</code>	New — 11 unit tests
<code>src/lib/vendor-order-routing-mode.ts</code>	Kitchen status line, delegate to registry
<code>src/lib/vendor-menu-route-guard.server.ts</code>	Re-export <code>integratedOrder</code> from registry
<code>src/app/vendor/[vendorId]/kitchen/page.tsx</code>	Square injection of state passed to kitchen
<code>src/app/vendor/[vendorId]/menu/imports/page.tsx</code>	Provider-aware title/subtitle/import
<code>src/app/vendor/[vendorId]/integrations/page.tsx</code>	New — generic integrations

<code>src/app/vendor/[vendorId]/integrations/square/page.tsx</code>	Back link → integrations
<code>src/app/admin/(dashboard)/vendors/[vendorId]/page.tsx</code>	Provider-aware Tools
<code>src/app/admin/(dashboard)/vendors/[vendorId]/AdminVendorRescueClient.tsx</code>	Gated Square diagnostics Deliverect Menu/POS
<code>src/app/admin/(dashboard)/vendors/[vendorId]/menu-history/page.tsx</code>	Provider-aware subtitle
<code>src/app/admin/(dashboard)/vendors/[vendorId]/menu-history/VendorImportsSection.tsx</code>	Generic "Menu imports" source-aware draft review
<code>src/lib/vendor-order-routing-mode.test.ts</code>	Updated kitchen mode expectations
<code>src/app/vendor/[vendorId]/vendor-menu-management.test.ts</code>	Provider-aware page tests

Hardcoded strings removed

Location	Before	After
Kitchen Mode (all Square vendors)	"Square order injection is not live yet..."	Injection-aware: enabled vs not active
Vendor menu imports subtitle	Deliverect-biased	<code>vendorMenuImportsPageSubtitle(mode)</code>
Admin menu-history subtitle	"Deliverect imports, draft review..."	<code>vendorMenuManagementPageSubtitle(mode, name)</code>
Admin import draft banner	"A Deliverect import is waiting..."	<code>menuImportDraftReviewBanner(source, name)</code>
Admin import section heading	"Deliverect imports"	"Menu imports"
Admin vendor Tools	Always Deliverect labels	Gated by routing mode
Admin Menu/POS section	Always Deliverect fields + refresh	Visible only for Deliverect routing
Admin Square diagnostics	Shown for all vendors	Gated to Square routing only

Intentionally unchanged (provider-specific panels):

- `VendorDeliverectMenuImportsPanel` / `VendorSquareMenuImportsPanel` — correct split by mode
- `menu-import-ui-labels.ts` row labels ("Square catalog", "Deliverect menu") — source-specific by design
- Square integration sub-page — Square-specific by design
- `connect-pos` wizard — Deliverect-specific by design

Provider display registry

File: `src/lib/integrations/provider-display.ts`

Maps `manual_dashboard` | `deliverect` | `square` (+ Toast placeholder) to:

- `displayName`, `shortName`, `routingDescription`
- `menuImportLabel`, `catalogLabel`, `connectedLabel`
- `menuImportsSectionTitle`

Key helpers:

Helper	Purpose
<code>vendorMenuImportsPageSubtitle</code>	Vendor menu imports page subtitle
<code>vendorMenuManagementPageSubtitle</code>	Admin menu-history subtitle
<code>menuImportDraftReviewBanner</code>	Draft-awaiting-review banner by import source
<code>vendorKitchenModeNotice</code> / <code>vendorKitchenModeStatusLine</code>	Kitchen Mode banners
<code>adminSquareInjectionDiagnosticsVisible</code>	Gate Square admin panel
<code>adminDeliverectMenuPosSectionVisible</code>	Gate Deliverect Menu/POS section
<code>adminPosMappingToolVisible</code>	Gate Deliverect mapping tool link
<code>adminMenuManagementToolDescription</code>	Admin Tools card description

Page responsibilities (final)

Page	Responsibility
------	----------------

Setup (/vendor/[id]/setup)	General readiness checklist; integration summary card (provider-agnostic framing)
Integrations hub (/vendor/[id]/integrations)	Active routing summary, readiness, provider connection cards
Square integration (/vendor/[id]/integrations/square)	Square OAuth, location, connection health
Connect POS (/vendor/[id]/connect-pos)	Deliverect channel wizard (redirects manual vendors)
Menu management/imports (/vendor/[id]/menu/imports)	Draft/import review, publish — shared page, provider panels swapped
Menu builder (/vendor/[id]/menu-builder)	Manual/Open Order menu editing
Kitchen mode (/vendor/[id]/kitchen)	Operational order board with provider-aware notices
Admin vendor detail (/admin/vendors/[id])	Admin diagnostics/toggles grouped by active routing
Admin menu-history (/admin/vendors/[id]/menu-history)	Admin import review + snapshots (provider-aware copy)

No pages deleted. Legacy /menu-imports redirect retained.

Provider-specific behavior

manual_dashboard / tablet

- Kitchen: no POS warning; optional status line about Open Order orders
- Menu: Menu Builder (not imports page)
- Integrations hub: Dashboard routing card; no POS requirement implied
- Admin: no Square injection panel, no Deliverect Menu/POS section, no POS mapping tool

Deliverect

- Kitchen: POS-managed vs fallback copy based on connection state
- Menu: Deliverect panel on shared imports page
- Integrations hub: Deliverect connection card → connect-pos
- Admin: Deliverect Menu/POS section, mapping tool, no Square injection panel

Square

- Kitchen: injection operational vs not active (loads loadSquareOrderRoutingReadiness)

- Menu: Square panel on shared imports page; "Square catalog import" labels
- Integrations hub: Square card → integrations/square
- Admin: Square injection diagnostics panel; no Deliverect Menu/POS section

Toast (placeholder only)

- `TOAST_PLACEHOLDER_PROFILE` in registry; no UI wiring or behavior
-

Tests / QA

Test file	Result
<code>provider-display.test.ts</code>	11/11 passed
<code>vendor-order-routing-mode.test.ts</code>	16/16 passed
<code>vendor-menu-management.test.ts</code>	13/13 passed
<code>npm run build</code>	Passed (Prisma pool timeouts during static gen — pre-existing, non-blocking)

Part 8 coverage:

1. Square vendor menu imports — no Deliverect in page source ✓
 2. Deliverect vendor — Deliverect copy, not Square ✓
 3. Manual vendor — no Deliverect/Square required on imports (redirects to builder) ✓
 4. Kitchen manual — no Square/Deliverect warning ✓
 5. Kitchen Square — Square copy only ✓
 6. Kitchen Deliverect — Deliverect copy only ✓
 7. Setup — provider-agnostic descriptions ✓
 8. Admin Square panel — gated ✓
 9. Admin Deliverect panel — gated ✓
 10. Public customer pages — unchanged (no provider diagnostics) ✓ 11–13.
Injection/import/routing behavior — unchanged (copy-only diff) ✓
 11. Build passes ✓
-

Known limitations

1. **Admin still loads Square diagnostics data** for all vendors server-side; only the UI panel is gated. Could optimize to skip DB calls for non-Square vendors.
2. **Setup page** still shows `VendorSquareSetupSummary` for Square vendors inline — not moved to integrations hub (by design; setup remains readiness-focused).

3. **Vendor nav** does not yet link to `/integrations` hub explicitly; reachable via setup and Square integration back-link.
 4. **Square admin Menu/POS refresh** label exists in registry but no Square-specific admin refresh section yet (Deliverect-only section retained).
 5. **Toast** placeholder metadata only — no enum value wired in Prisma routing mode today.
-

Acceptance criteria

Criterion	Status
Square vendors do not see Deliverect-labeled pages/sections	✓
Deliverect vendors do not see Square injection copy unless Square connected	✓
Manual/tablet vendors do not see POS provider requirements	✓
Menu imports page is generic and provider-aware	✓
Kitchen Mode copy is provider-aware	✓
Admin diagnostics are provider-aware	✓
No checkout/payout/injection/routing behavior changed	✓
