

Square Menu Imports Retrofit

Date: 2026-07-08

Summary

Moved the existing Square catalog preview/import UI from the Square integration page into the generic Menu Imports panel (`/vendor/{vendorId}/menu/imports`) for vendors with `orderRoutingMode=square` . The integration page now focuses on connection/location management and links to Menu Imports for catalog work.

Files changed

File	Change
<code>src/components/vendor/VendorSquareCatalogCard.tsx</code>	Extracted <code>VendorSquareCatalogImportControls</code> card is now a thin wrapper
<code>src/components/vendor/menu-imports/VendorSquareMenuImportsPanel.tsx</code>	Wired import controls; connection-state UX (not connected / unhealthy / healthy
<code>src/app/vendor/[vendorId]/integrations/square/page.tsx</code>	Removed full catalog card; added "Manage Square menu import" link carc
<code>src/actions/vendor-square-catalog.actions.ts</code>	Revalidates <code>/menu/imports</code> after import
<code>src/lib/integrations/square/square-routing-readiness.ts</code>	Added <code>hasConnection</code> , <code>health</code> , <code>menuImportsUrl</code> to status type
<code>src/lib/vendor-pod-readiness.ts</code>	Square setup CTAs: integrations when not connected, Menu Imports when ready
<code>src/lib/vendor-dashboard-data.server.ts</code>	Loads <code>squareCatalogImportReady</code> for setup checklist
<code>src/app/vendor/[vendorId]/vendor-menu-management.test.ts</code>	Updated Square panel + integration page tests
<code>src/actions/vendor-square-catalog.actions.test.ts</code>	Asserts <code>menu/imports</code> revalidation
<code>src/lib/vendor-pod-readiness.test.ts</code>	Square menu CTA routing tests

Component reuse

VendorSquareCatalogCard was refactored, not rebuilt.

- New export: **VendorSquareCatalogImportControls** — preview/import buttons, reports, warnings, and review link.
- **VendorSquareCatalogCard** remains as an optional **DashboardCard** wrapper (not used on integration page anymore).
- **VendorSquareMenuImportsPanel** loads Square status once via **loadAdminSquareRoutingStatus** and passes **health** into controls when **hasConnection** is true.

Square Menu Imports panel behavior

State	UX
Not connected	Connection status “Not connected”; amber prompt + link to <code>/integrations/square</code> ; no preview/import buttons
Connected, unhealthy	Business/location if known; amber “not ready” prompt + link to integration; controls rendered but disabled with missing-requirement reason
Connected, healthy	Connected message, business, location; enabled Preview / Import; preview/import reports; post-import link to <code>/vendor/{vendorId}/menu-imports/{jobId}</code>

Square integration page changes

- **Removed:** full **VendorSquareCatalogCard**
- **Added:** small “Menu import” card with link **Manage Square menu import** → `/vendor/{vendorId}/menu/imports`
- Page description updated to connection/location focus only

Setup CTA changes

Vendor setup checklist (`vendor-pod-readiness` + dashboard data):

- Square **not connected** (`squareCatalogImportReady=false`) → **Connect Square** → `/integrations/square`

- Square **connected + healthy** (`squareCatalogImportReady=true`) → **Open Menu Imports** → `/menu/imports`
- Uses `evaluateSquareConnectionHealth` at dashboard load (not `posComplete` , which is always false for Square until order injection exists)

Import semantics (unchanged)

Behavior	Status
Preview writes no <code>MenuImportJob</code> / <code>MenuVersion</code> / <code>ProviderEntityMapping</code>	Unchanged
Import creates <code>MenuImportJob</code> (<code>SQUARE_CATALOG_PULL</code>)	Unchanged
Import stores <code>MenuImportRawPayload</code> + draft <code>MenuVersion</code>	Unchanged
Import upserts <code>ProviderEntityMapping</code>	Unchanged
Re-import idempotent	Unchanged
Review/publish at <code>/vendor/{vendorId}/menu-imports/{jobId}</code>	Unchanged
No auto-publish	Unchanged
<code>Vendor.menuSource</code> unchanged	Unchanged
<code>orderRoutingMode</code> unchanged	Unchanged
Square normalizer untouched	Unchanged

Server actions (`previewSquareCatalogAction` , `importSquareCatalogAction`) are route-agnostic; authorization via `canManageVendor` unchanged.

Tests / QA

#	Test	Result
1	Square panel connect prompt when not connected	Pass (static + structure)
2	Square panel preview/import when connected	Pass
3	Preview no DB writes	Pass (<code>square-menu-import.service.test.ts</code>)
4	Import creates job/raw/draft	Pass (<code>square-menu-import.service.test.ts</code>)
5	Import writes <code>ProviderEntityMapping</code>	Pass (<code>square-menu-import.service.test.ts</code>)

6	Success link → /menu-imports/{jobId}	Pass (controls source)
7	Integration page links to Menu Imports	Pass
8	Square vendors → Menu Imports nav	Pass (existing vendor-menu-management.test.ts)
9	Deliverect imports unchanged	No code changes to Deliverect panel
10	Manual vendors → Menu Builder	Pass (existing tests)
11	Build	Pass

Commands run:

```
npm run test -- --run src/lib/vendor-pod-readiness.test.ts
src/actions/vendor-square-catalog.actions.test.ts
src/app/vendor/[vendorId]/vendor-menu-management.test.ts
src/lib/integrations/square/square-menu-import.service.test.ts
npm run build
```

Known limitations

- Square vendors remain **non-orderable** until Square order injection is implemented (`SQUARE_ROUTING_NOT_IMPLEMENTED` at checkout).
- `posComplete` / POS checklist item for Square still reflects routing readiness (false), separate from catalog import readiness.
- Setup checklist `squareCatalogImportReady` is evaluated on dashboard/setup data load only (not live-updated without navigation).
- `VendorSquareCatalogCard` wrapper retained for potential reuse but is not mounted on any page after this change.
