

Beta: vendor order routing is tablet-only

Date: 2026-08-08
Status: Implemented

Goal

For beta launch, vendors must not see or configure Deliverect / Square as order-routing options. Tablet / Open Order dashboard (`manual_dashboard`) is the only vendor-facing routing method. Integration infrastructure and admin tooling remain intact.

How vendor routing availability is centralized

New module: `src/lib/vendor-routing-availability.ts`

API	Beta behavior
<code>VENDOR_POS_ROUTING_SELECTION_ENABLED</code>	<code>false</code>
<code>getVendorAvailableRoutingModes()</code>	<code>["manual_dashboard"]</code>
<code>getAdminAvailableRoutingModes()</code>	<code>manual_dashboard</code> , <code>deliverect</code> , <code>square</code>
<code>assertVendorPosRoutingConfigurationAllowed()</code>	Rejects vendor POS connect/config mutations
<code>vendorMayConfigurePosOrderRouting()</code>	UI gate for vendor surfaces

Re-enablement: set `VENDOR_POS_ROUTING_SELECTION_ENABLED = true` (no large reconstruction required).

Vendor-facing screens changed

Surface	Change
Account vendor onboarding (<code>VendorSetupForm</code>)	Removed “Menu system” / POS selector; copy says orders appear in Open Order dashboard
Vendor create (<code>createVendorProfile</code>)	Explicitly sets <code>orderRoutingMode: manual_dashboard</code> , <code>menuSource: open_order</code>
Setup / Integrations hub	No available Deliverect/Square/Toast cards; “Order management” + Menu framing

connect-pos	Always blocked under beta policy (tablet message + Kitchen CTA)
integrations/square	Blocked under beta policy (Kitchen + Menu Builder CTAs)
Setup checklist (vendor audience)	Presented as tablet/Menu Builder; no Connect POS / Connect Square

Server actions / APIs changed

Vendor-authorized mutations now call

`assertVendorPosRoutingConfigurationAllowed()` :

- `startDeliverectPosOnboarding` , `saveVendorPosConnection`
- `retryVendorDeliverectConnection`
- `selectSquareLocationAction` , `disconnectSquareAction`
- `GET /api/vendor/[vendorId]/square/oauth/start` → **403** when beta policy is on

There was already **no** vendor API to set `orderRoutingMode` to `deliverect` / `square` .

Admin-only `adminUpdateVendorOrderRoutingMode` still supports all modes.

Onboarding default

Yes — new vendors are created with:

- `orderRoutingMode = manual_dashboard`
- `menuSource = open_order`

(schema defaults reinforced by explicit create fields).

Legacy integrated vendors

If `orderRoutingMode` is still `deliverect` or `square` :

- Vendor cannot connect/reconfigure POS routing
- Setup/integrations CTAs point to Kitchen / dashboard, not Connect POS/Square
- Provider connection rows and historical data are **not** deleted
- Order-injection backends and admin diagnostics remain
- Admins should migrate them to tablet via existing routing reconcile before launch

Admin Deliverect / Square visibility

Preserved.

- Admin vendor routing radios use `getAdminAvailableRoutingModes()` (all three modes)
- Admin vendor search routing filter unchanged (Tablet / Deliverect / Square)
- Admin diagnostics / Square injection tools unchanged

Integration code not removed

Deliberately retained: Deliverect/Square APIs, OAuth, mappings, webhooks, import/publish pipelines, PEM, admin repair scripts, schema fields.

Compatibility with active menu source

Tablet beta vendors use `open_order` menu source + Menu Builder. Routing reconcile from the menu-source ownership work remains the admin path to demote historical provider menus — this change does not revive them.

Tests

- `vendor-routing-availability.test.ts` — vendor allowlist vs admin allowlist + mutation gate
- `vendor-setup-integrations.test.ts` — beta UI + re-enable path
- `vendor-pod-readiness.test.ts` — checklist no longer offers Square connect for vendors
- `provider-ux-regression.test.ts` — updated for tablet-only cards

Verification checklist

1. New vendor → `manual_dashboard`, no POS routing selection
2. Existing tablet vendor → no Deliverect/Square options
3. Legacy Deliverect/Square → cannot re-enable via UI/API; data retained
4. Vendor OAuth/connect actions rejected
5. Admin can still set/filter Deliverect and Square
