

Kitchen Action Lock for Active Integrations

Date: 2026-07-09

Scope: Vendor kitchen/dashboard status buttons and server enforcement for externally routed orders (Square, Deliverect, future POS). Checkout, payouts, Square injection, Square webhook sync, Deliverect routing, and manual routing are unchanged.

Summary

Vendors with an **active external routing integration** now see kitchen status actions locked or de-emphasized. The external provider is the operational source of truth for fulfillment status. Orders remain fully visible in Open Order; status still updates from provider webhooks/sync where configured. Failed routing and admin recovery paths remain usable.

Files changed

Area	Files
Policy	<code>src/lib/order-routing/kitchen-action-policy.ts</code> (new), <code>src/lib/order-routing/kitchen-action-policy.test.ts</code> (new)
Provider copy	<code>src/lib/integrations/provider-display.ts</code>
Authority bridge	<code>src/lib/deliverect-vendor-order-authority.ts</code> , <code>src/domain/status-authority.ts</code>
Server enforcement	<code>src/services/order-status.service.ts</code> , <code>src/app/api/vendor/orders/[vendorOrderId]/status/route.ts</code> , <code>src/app/api/vendor/[vendorId]/orders/route.ts</code>
Vendor UI	<code>VendorKitchenOrderCard.tsx</code> , <code>VendorKitchenBoard.tsx</code> , <code>VendorOrderCard.tsx</code> , <code>VendorDashboardLiveOrders.tsx</code> , <code>VendorDashboardActiveOrdersSection.tsx</code> , kitchen/dashboard pages
Data	<code>src/lib/vendor-orders-board-data.ts</code> , <code>src/lib/vendor-dashboard-data.server.ts</code>
Admin UI	<code>AdminVendorOrderOperationalPanel.tsx</code>
Tests	<code>deliverect-vendor-order-authority.test.ts</code> , <code>vendor-operational-api-auth.test.ts</code> , <code>VendorOrderCard.deliverect-authority.test.ts</code>

Kitchen action policy rules

`getKitchenActionPolicy(vendor, order, integration?)` returns:

- `actionsLocked` , `provider` , `providerDisplayName` , `reason` , `managedOrderBadge` , `kitchenLockTooltip` , `statusSyncAvailable` , `statusSyncCopy` , `recoveryAllowed` , `recoveryCopy` , `showProviderManagedState` , `routingFailed`

Manual / tablet (`orderRoutingMode = manual_dashboard`)

- `actionsLocked = false`
- Badge: **Managed in Open Order**
- No external lock messaging

Square (`orderRoutingMode = square`)

Locked when:

- Not manually recovered and not `admin_override`
- Routing did not fail without external handoff
- `squareOrderId` present **or** `routingStatus` is `sent` / `confirmed`

Not locked when:

- `routingStatus = failed` and no `squareOrderId` → recovery copy: *Routing failed. Open Order still has the paid order.*
- `manuallyRecoveredAt` set → admin/vendor recovery in OO

Status sync: `statusSyncAvailable` from server-passed `squareStatusSyncConfigured` (webhook env configured).

Deliverect (`orderRoutingMode = deliverect`)

Locked when:

- Channel link present
- Same recovery/admin exceptions as Square
- `deliverectOrderId` present **or** `routingStatus` is `sent` / `confirmed`

Status sync: `deliverectRoutingLive` (global routing retry availability).

Future providers (e.g. Toast)

- Extend `provider-display.ts` registry (`getKitchenManagedOrderBadge` , `getKitchenVendorLockMessage` , etc.) and policy branches using the same pattern.
-

Buttons / actions locked

For locked orders, vendor-facing UI hides primary status transitions and disables skip-ahead / deny where `canVendorRejectVendorOrder` already respects authority:

- Accept / Confirm
- Preparing
- Ready
- Complete / Picked up
- Deny / Cancel (when vendor-controlled)

Still available:

- Degraded Deliverect manual confirm (`routingDegraded` + `pending/pending` → Confirm manually)
 - Admin recovery transitions (`admin_action` source)
 - Order visibility, pickup codes, line items, external status display
-

Provider-specific copy

Provider	Badge	Lock tooltip (example)
Manual	Managed in Open Order	—
Square	Managed in Square	Manage this order in Square. Updates from Square will sync back to Open Order.
Square (no webhook)	Managed in Square	...Webhook sync is not configured, so Open Order may not update automatically.
Deliverect	Managed in Deliverect	Manage this order through Deliverect/POS. ...
Routing failed	—	Routing failed. Open Order still has the paid order.

Copy is provider-specific: Square messaging never appears for Deliverect vendors and vice versa.

Server-side enforcement

1. **POST /api/vendor/orders/[vendorOrderId]/status** — `canVendorDashboardMutateVendorOrder()` + provider-aware `vendorDashboardMutateBlockedMessage()` ; returns **409** with clear error before transition.
2. **applyVendorOrderTransition** — `canVendorDashboardMutateFromPolicy()` for `vendor_dashboard` source on non-manual vendors; blocks stale tabs / direct API calls.
3. **shouldApplyStatusUpdate** — allows `square_webhook` on `pos` authority (Square status sync unchanged).

Admin routes (`admin_action` , manual recovery, retry routing, sync from Square) are not gated by vendor kitchen lock.

Recovery exceptions

Condition	Behavior
<code>routingStatus = failed</code> without <code>squareOrderId</code> / <code>deliverectOrderId</code>	No "Managed in ..." badge; recovery banner; actions unlocked for manual recovery
<code>manuallyRecoveredAt</code> / <code>admin_override</code>	Actions unlocked in OO
Deliverect degraded pending	Manual confirm still allowed via existing degraded path

Admin behavior

`AdminVendorOrderOperationalPanel` shows:

- Provider-managed badge when locked
- Lock reason / status sync state
- Routing failure banner when applicable

Admin retry routing, sync status from Square, manual recovery, and issue tools remain available.

Tests / QA results

#	Scenario	Result
1	Manual vendor — actions enabled	✓ kitchen-action-policy.test.ts
2	Square + squareOrderId — locked	✓
3	Square sent without id — locked	✓
4	Square routing failed — recovery copy	✓
5	Deliverect routed — locked	✓
6	Deliverect routing failed — recovery copy	✓
7	Server rejects locked Square update	✓ vendor-operational-api-auth.test.ts
8	Server rejects locked Deliverect update	✓
9	Admin recovery / admin_override unlocks	✓ policy tests
10	Provider-specific copy	✓
11–12	No cross-provider copy	✓
13	Manual — no external lock warning	✓
14	square_webhook allowed on POS authority	✓ status-authority in policy tests
15	Build passes	✓ npm run build

Known limitations

- Client default for webhook sync flag:** squareStatusSyncConfigured defaults to false on the client unless passed from server pages; server enforcement uses live env check.
- Square sent/confirmed without squareOrderId :** Locked by policy when routing succeeded in OO state machine; aligns with provider-as-source-of-truth product rule.
- Deliverect without channel link:** Not locked (routing not operational).
- Vendor orders ledger detail panel** still uses legacy Square/Deliverect notices in places; kitchen/dashboard cards use unified policy.

Acceptance criteria

Criterion	Met
-----------	-----

Manual/tablet vendors manage orders in OO as before	✓
Square-managed orders visible; vendor status buttons locked	✓
Deliverect-managed orders visible; vendor status buttons locked	✓
Provider-specific copy correct	✓
Failed routing orders recoverable	✓
Server actions cannot bypass lock	✓
Admin recovery remains possible	✓
Checkout, payouts, injection, webhooks, Deliverect, manual routing unchanged	✓
