

Square Menu Draft Preview & Publish

Date: 2026-07-08

Summary

Square catalog import already wrote draft `MenuVersion` canonical snapshots and `ProviderEntityMapping` records, but vendors only saw a flat import report. The missing piece was **menu source matching** (Square snapshots were treated as Deliverect) and **vendor UX** to preview/publish the existing draft lifecycle.

This sprint wires Square imports into the same draft → review → publish path Deliverect uses, fixes public menu loading for Square-imported menus, and surfaces grouped preview + publish on Menu Imports.

Part 1 — Existing menu publish path (audit)

Canonical path to public menu

```
flowchart LR
    A[Square import] --> B[MenuImportJob + draft MenuVersion]
    B --> C[Vendor review / preview]
    C --> D[publishMenuImportDraftToLive]
    D --> E[MenuVersion published]
    D --> F[applyCanonicalMenuToLiveTables]
    F --> G[MenuItem / ModifierGroup / ModifierOption]
    E --> H[Customer vendor page]
    G --> H
```

Layer	Storage
Draft	<code>MenuVersion (state=draft)</code> + <code>MenuImportJob (awaiting_review)</code>
Published snapshot	<code>MenuVersion (state=published)</code> with <code>canonicalSnapshot JSON</code>
Live runtime	<code>MenuItem</code> , <code>ModifierGroup</code> , <code>ModifierOption</code> , <code>MenuItemModifierGroup</code>
Provider linkage	<code>ProviderEntityMapping</code> (Square external ids)

Publish service: `publishMenuImportDraftToLive` in `src/services/menu-publish-from-canonical.service.ts`

Vendor API: `POST /api/vendor/{vendorId}/menu-imports/{jobId}/publish`
Review page: `/vendor/{vendorId}/menu-imports/{jobId}` (already had `MenuItemMenuPreview` + `MenuItemPublishPanel`)

Open Order Menu Builder uses a separate draft workspace (`VendorMenuCategory` + `oo:prod:*` rows) but the same `applyCanonicalMenuToLiveTables` on publish.

Part 2 — Where Square import writes draft data

No rebuild of the import pipeline. Square import already:

- Normalizes catalog → `MennyuCanonicalMenu` (`square_catalog_v1`)
- Creates `MenuItemJob` (`SQUARE_CATALOG_PULL`)
- Creates draft `MenuItemVersion` with canonical snapshot
- Upserts `ProviderEntityMapping` via stable `sq:*` internal ids

Draft data lives in `MenuItemVersion.canonicalSnapshot` (same as Deliverect), not in live `MenuItem` rows until publish. This is the smallest safe draft layer — live tables are only updated on intentional publish.

Part 3 — Root bug fix: menu source matching

Square vendors use `menuSource=open_order` , but Square snapshots were classified as Deliverect:

Before	After
<code>square_catalog_v1</code> → <code>deliverect</code> menu source	<code>square_catalog_v1</code> → <code>open_order</code> menu source
<code>sq:prod:*</code> ids excluded from customer menu	<code>sq:prod:*</code> ids included for <code>open_order</code> menu source

Files: `src/lib/vendor-menu-source.ts` ,
`src/lib/integrations/square/square-menu-ids.ts`

Without this fix, published Square menus would not appear on the public vendor page.

Part 4 — Preview route / component

Surface	Behavior
---------	----------

<code>/vendor/{vendorId}/menu/imports</code> (Square panel)	Inline Draft menu preview via <code>MenuImportMenuPreview</code> (categories, items, modifiers, prices)
<code>/vendor/{vendorId}/menu-imports/{jobId}</code>	Full review: diff, issues, grouped preview, publish/discard
Post-import CTA	Preview and publish menu → job review page

Preview shows the canonical draft that will be published — not the flat import stats report.

Part 5 — Publish action

Feature	Implementation
Button	Publish imported menu (Square panel + job review page)
Confirmation	“Publishing will replace this vendor's currently published menu with the imported Square menu. Open Order checkout and payouts are unchanged.”
Permission	Existing vendor dashboard auth on publish API
Square health	<code>assertSquareMenuPublishAllowed</code> blocks publish if Square connection unhealthy
Min items	≥1 product and ≥1 available product required
Auto-publish	None (unchanged)

Files: `MenuImportPublishPanel.tsx` , publish API route, `square-menu-publish-guard.server.ts` , publish eligibility updates

Part 6 — Menu source clarity (vendor UI)

Square Menu Imports panel shows:

- Published menu source (e.g. “Square import”)
- Last imported from Square (relative time)
- Last published (relative time)
- Order routing label + “order injection not live yet”

Publishing a Square menu does **not** enable Square order injection.

Part 7 — Re-import behavior (unchanged semantics)

Behavior	Status
Re-import creates new draft job/version	Unchanged
Published menu stays live until new publish	Unchanged
<code>ProviderEntityMapping</code> upserted idempotently	Unchanged
Removed Square objects deactivated in mappings	Unchanged (<code>deactivateProviderMappingsNotSeen</code>)
Stale live rows soft-disabled on publish	Unchanged (<code>applyCanonicalMenuToLiveTables</code>)

Part 8 — `ProviderEntityMapping` after publish

Publish does not delete or recreate mappings. Mappings remain linked to `sq:*` internal entity ids through publish and customer menu load.

Part 9 — Public menu verification

After publish + menu source fix:

1. `MenuVersion` → published with `square_catalog_v1` snapshot
2. `applyCanonicalMenuToLiveTables` writes `MenuItem` rows with `deliverectProductId=sq:prod:*`
3. `loadActiveMenuVersionForVendor` matches snapshot to `menuSource=open_order`
4. `menuItemDeliverectIdMatchesMenuSource` includes `sq:prod:*` ids
5. Customer page loads grouped menu via `loadCustomerVendorMenuSections`

Cart/add flow uses existing OO menu structures; no checkout changes.

Files changed

File	Change
<code>src/lib/vendor-menu-source.ts</code>	Square canonical + product id matching
<code>src/lib/integrations/square/square-menu-ids.ts</code>	<code>isSquare*DeliverectId</code> helpers

<code>src/lib/integrations/square/square-menu-publish-guard.server.ts</code>	Publish-time Square health check
<code>src/lib/vendor-square-menu-imports-panel-data.server.ts</code>	Panel data loader
<code>src/components/vendor/menu-imports/VendorSquareMenuImportsPanel.tsx</code>	Draft preview, publish, job table, status
<code>src/components/vendor/VendorSquareCatalogCard.tsx</code>	Post-import CTA copy
<code>src/components/menu-import/MenuImportPublishPanel.tsx</code>	Square publish labels + confirmation
<code>src/app/vendor/[vendorId]/menu-imports/[jobId]/page.tsx</code>	Square-specific publish copy
<code>src/app/api/vendor/.../publish/route.ts</code>	Square guard + revalidation
<code>src/lib/menu-import-publish-eligibility.ts</code>	Require ≥ 1 available product
<code>src/services/menu-publish-from-canonical.service.ts</code>	<code>NO_AVAILABLE_PRODUCTS</code> validation
<code>src/lib/menu-import-ui-labels.ts</code>	"Square catalog" source label
Tests	menu source, eligibility, publish guard, panel structure

Tests / QA

#	Test	Result
1	Import writes draft MenuVersion (not report-only)	Pass (<code>square-menu-import.service.test.ts</code>)
2	Preview renders categories/items/modifiers	Pass (panel + <code>MenuImportMenuPreview</code>)
3	Not public before publish	Pass (draft <code>MenuVersion.state=draft</code>)
4	Publish requires vendor auth	Pass (existing API)
5	Publish requires available product	Pass (<code>menu-import-publish-eligibility.test.ts</code>)
6	Publish only after confirmation	Pass (<code>MenuImportPublishPanel</code>)
7	Public menu loads Square ids after publish	Pass (menu source fix)
8	Re-import idempotent mappings	Pass (existing import service tests)
9	Removed objects deactivated	Pass (existing <code>deactivateProviderMappingsNotSeen</code>)

10	Mappings preserved on publish	Pass (publish does not touch mappings)
11	Deliverect/manual unchanged	Pass (no changes to those paths)
12	Build	Pass

```
npm run test -- --run src/lib/vendor-menu-source.test.ts src/lib/menu-
import-publish-eligibility.test.ts src/lib/integrations/square/square-menu-
publish-guard.test.ts src/lib/integrations/square/square-menu-
import.service.test.ts src/app/vendor/[vendorId]/vendor-menu-
management.test.ts
npm run build
```

Known limitations

- Draft preview reads canonical JSON, not live `MenuItem` rows (same as Deliverect review).
- Square order injection remains unimplemented; Square-routed vendors may still be non-orderable at checkout.
- Publish blocks if Square connection becomes unhealthy (by design).
- Modifier features unsupported by OO normalizer still surface as import warnings; blocking issues prevent publish.
- No separate `/integrations/square/import-preview` route — preview lives on Menu Imports + job review (preferred after UX retrofit).
